

ChronoRealm / WE - Public Evidence v1.5

Bounded software-assurance evidence | Sanitized public release | Source run: 2026-08-12 12:50 PM ET

Current public status: PASS - 11/11 major validation gates. This is local software/evidence-integrity evidence, not independent certification.

Evidence item	Recorded result	Scope
v1.5 major gates	11 / 11 PASS	Actual Windows one-click result
Inherited MASTER suite	14 / 14 PASS	Bounded inherited validation
v1.5 static manifest	256 files	Zero missing / zero bad hashes
v1.4 predecessor manifest	231 files	Frozen predecessor integrity

What the current release tests

Static integrity; bounded inherited validation; welfare non-inducement policy checks; public-source/Being boundary; materials-characterization software integration; commercialization intake/capture mechanisms; Windows one-click pathing; and Python syntax/AST integrity.

What it does not establish

Independent certification; universal correctness; clinical validity; experimental reproduction of the cited materials study; independent second-physical-host reproduction; or resolution of the Step 17 -> Step 17B formal abstraction/refinement question.

Evidence doctrine

Negative results and unresolved findings remain evidence. A PASS means the included test completed within its declared scope; it does not widen the claim beyond that scope.

Public release purpose

Provide a stable, sanitized evidence reference for reviewers, funding programs, pilot prospects, and public technical discussion without publishing local machine/user identifiers or private meeting material.
